### SS Dimple Hole Perforated Sheet

An SS dimple hole perforated sheet is a sheet of stainless steel with small, raised, round indentations (dimples) and holes punched into it, offering both aesthetic appeal and structural strength for applications like architectural panels, safety barriers, and filters. It's made from various stainless steel grades, such as SS304, SS 316, and can be customized for different hole sizes, patterns, and thicknesses depending on its specific use

### SS wire mesh

SS wire mesh is a flexible metal fabric made from stainless steel wires woven or welded together into a grid pattern, offering benefits like high corrosion resistance, strength, and heat resistance due to the chromium in its alloy. It is highly versatile, used in applications ranging from industrial filtration and chemical processing to architectural elements, security screens, and even garden use for pest control.
